

# TelePsychiatry Program

Rapid. Remote. Reliable.

## Our Service

Become better equipped to provide inpatient behavioral health services with telemedicine for pediatric, adolescent, and adult psychiatric consultations. Emergent and routine services enable timely access to psychiatrists who can conduct comprehensive evaluations, provide diagnoses, develop treatment plans, and offer recommendations on the next level of care for a range of behavioral health conditions.

On-site staff can rely on TeleSpecialists to complete scheduled bedside rounds, manage emergency cases, order necessary testing, and close the loop on patient outcomes with detailed notes entered directly into your native EMR or CPOE system.

- Our team responds to calls within an hour to allow our physicians to work with patients in a timely manner and help partners minimize sitter times
- We work alongside your team for all types of cases and situations, including full psychiatric evaluations, behavioral health diagnoses, and adolescent and pediatric evaluations for patients under the age of 12

## KEY PROGRAM BENEFITS

- 24/7/365 access to inpatient psychiatry professionals
- Evidence-based, customized protocols to optimize mental health patient care
- Reduced ongoing personnel costs associated with hiring inpatient psychiatrists
- Our TelePsychiatrists document and write orders into your native EMR
- Optimized regulatory compliance provided by our TelePsychiatry coverage aids in reducing patient and facility risk
